Supporting Documents

As the JLTP focuses on the four Shared Priorities of congestion, accessibility, road safety and air quality there are not specific chapters on individual modes of transport. This means sections on different modes can be found across several chapters. The purpose, therefore, of the supporting documents is to bring together these separate references.

Accompanying the Joint Local Transport Plan are 19 supporting documents. They cover a wide range of modes from walking and cycling to coaches and waterways (see list below).

Each supporting document sets out our vision for the mode, its contribution to meeting the four Shared Priorities, key issues, what we delivered during the first LTP, best practice and our strategy for the JLTP period.

The supporting documents can be found in this accompanying volume to the Plan. They are:

	<i>page no</i>
1. Bus Strategy	1
