These projections, for areas in England, published on 12 June 2008 are based on the 2006 mid-year population estimates

Note: The population projections are heavily influenced by the recent high levels of international migration.

There is uncertainty about whether or not this high inflow will continue and whether the 2006 based projections are a robust indication of future trends.

3. Sub Regional Household Projections, England

Note: Sub regional household projections are less robust than those at the regional level, particularly for those areas with relatively small numbers of households. This should be taken into account in using the figures (See footnotes).

Notes

Sub regional household projections are less robust than those at the regional level, particularly for those areas with relatively small numbers of households. This should be taken into account in using the figures.

The sub regional household projections are not 'National Statistics'.

The household projections are an indication of the likely increase in households given the continuation of recent demographic trends.

The household projections are not an assessment of housing need. They also do not take account of future policies.

Notes:

1. Estimates to 2006 are based on ONS mid-year population estimates. Estimates for 2001 to 2004 are subject to small changes from the 2004-based estimates due to changes in the household estimates and projections model which now undertakes calculations on Population Projections, and are not an assessment of housing need or do not take account of future policies. They are an indication of the likely increase in households given the continuation of recent demographic trends.

3. Sub regional household projections are less robust than those at the regional level, particularly for those areas with relatively small numbers of households. This should be taken into account in using the figures. Due to rounding, districts may not sum to regional totals.

Notes:

1. The data above is based on the ILO measure of unemployment and as such differs from the number of unemployed claimants. The ILO measure is now the official, and only internationally comparable, measure of UK unemployment.
2. The unemployment rate is calculated by dividing the number unemployed by the number of economically active residents of working age
3. This data is based on a sample survey and so subject to sampling variability

Notes:

1. Proportion for dates from 2009 onwards are calculated using the mid-2008 resident population aged 16-64. proportion for dates from 2010 onwards are calculated using the mid-2009 resident population aged 16-64. JSA claimant count records the number of people claiming Jobseekers Allowance (JSA) and National Insurance credits at Jobcentre Plus local offices.
2. Residence-based proportions express the number of claimants resident in an area as a percentage of the population aged 16-64 resident in that area.
3. This is not an official measure of unemployment, but is the only up to date indicative statistic available for areas smaller than Local Authorities.
4. The population figures used to calculate proportions have been changed from working age (16-59f/64m) to aged 16-64 for both males and females. This change affects proportions for all dates, so all proportions for all dates will differ to those downloaded previously. Figures for the population aged 16-64 are sourced from the mid-year population estimates

Notes:

1. Proportion for dates from 2008 onwards are calculated using the mid-2007 resident population aged 16-64. Proportion for dates from 2009 onwards are calculated using the mid-2008 resident population aged 16-64. proportion for dates from 2010 onwards are calculated using the mid-2009 resident population aged 16-64. JSA claimant count records the number of people claiming Jobseekers Allowance (JSA) and National Insurance credits at Jobcentre Plus local offices.
2. Residence-based proportions express the number of claimants resident in an area as a percentage of the population aged 16-64 resident in that area.
3. This is not an official measure of unemployment, but is the only up to date indicative statistic available for areas smaller than Local Authorities.
4. The population figures used to calculate proportions have been changed from working age (16-59f/64m) to aged 16-64 for both males and females. This change affects proportions for all dates, so all proportions for all dates will differ to those downloaded previously. Figures for the population aged 16-64 are sourced from the mid-year population estimates

This dataset is based on 100% of claims so is not subject to any sampling error. In outputs figures are rounded to the nearest 10, and those below 5 are suppressed as statistically unreliable (shown as -)

1. Carer's Allowance (CA) is paid to carers who look after a severely disabled person for at least 35 hours a week. The severely disabled person must be getting either higher or middle rate DLA care component or AA or maximum rate Constant Attendance Allowance with their War Pension or Industrial Injuries Disablement Benefit.

2. Disability Living Allowance (DLA) is paid to people who have become disabled before the age of 65 and who need assistance with personal care and/or mobility.

3. Incapacity Benefit (IB) is paid to people who have been incapable of work because of sickness or disability for at least four days in a row and who have paid sufficient contributions throughout their working lives.

4. Income Support (IS) is available to those under 60 who have a low income. Pension Credit is an income-related benefit which helps provide a minimum guaranteed income for those aged 60 and over living in Great Britain.

5. Jobseeker's Allowance is a benefit payable to unemployed people. In general, to be entitled to Jobseeker's Allowance, a person must be available for work for at least 40 hours a week, be actively seeking work, and have entered into a Jobseeker's Agreement

*West of England Earnings figures are the mean average of the median UA figures, all others are median. West of England figures are therefore not directly comparable to the other figures as they would appear higher.

There is no West of England Median figure. Median figures have still been used for UAs to avoid the skewing effects of extreme values
